# Delta & Delta max™ W

## **Roll-bag Converting**

For high speed production of wave-top bags and other kinds of bags on roll.

- → 1, 2 or more lanes
- → in-line or out-of-line
- → With PE, bio or recycled film

## Delta & Delta max™ W

### **Roll-bag Converting**

For production of wave-top bags on roll. The configuration includes a Delta sealing module and a punching module for forming the shape of the wave-top bag or similar cut-outs. The flexible dies in the punching module are fixed to a magnetic roller and can be changed to another cutting pattern within a few seconds.

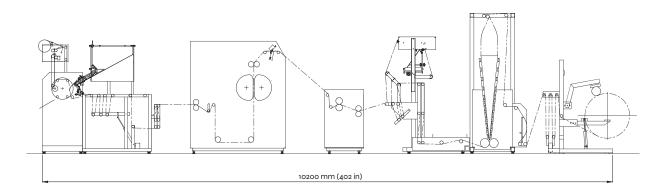

The Delta W can be adapted for production of other kinds of bags with additional modules of the Delta program. This gives you great flexibility to adjust to the changing market demands. All bag types can be produced perforated or interleaved.
